## NPA ECOLOGICAL

We introduce the new 3 pt. mounted mist blower ECOLOGICAL type provided of panels with recovery system. The novelty is recommended for vineyards 1,8-3,0 m where we can spray 2 complete rows in one way with low, medium and high volume at your convenience.

The recovery system limits the dispersion of the mixture in the surrounding environment and in the ground. The liquid recuperates return to the main tank, thanks to the suction system of the injector mounted on the top of the tank, which recuperates the liquid from the bottom of the panels to the main tank.

The distribution of the fog to the plants is made by air tube, which spray air and mixture to the plants with the principle face to face to be sure to pass all the plants. The distribution is provided of anti-drip device.

The last tests in France have given results that are above our expectations and they received consensus from many operators.

#### GÉNÉRAL FEATURES:

- Hot galvanized steel frame.
- POLYETHYLENE tank with liquid level gauge.
- Diaphragm pump mod. AR180BP 180 l/min 0-20 bar Annovi Reverberi.
- Gearbox one speed and neutral.
- Centrifugal turbine Ø 460 mm.
- 4 anti-pollution ejectors for recovery liquid 30-40 l/min.
- Pressure regulator valve mod. ECM working at 2-5 bar for distribution of the mixture at high, medium low volume
- 4 panels with recovery system with independent aspiration.
- The distribution is provided of anti-drip device with 16 PVC nozzles, ceramic tips, filter and diaphragm anti-drip device.
- Suction filter with shut-off valve.
- 2 batch filters before the nozzles.
- Manual remote control in tractor cab's.
- Clean water tank for hand washing.
- Rear bumper with rounded tube.
- Trash-shield.
- Fresh water tank.
